EDITOR'S NOTE

The very word *geoengineering* evokes fantastic ideas. Futuristic technology, environmental salvation, and utopian design all spring to mind. Yet the future of geoengineering will lie inevitably with the law. Cloud seeding or orbital mirrors, once seemingly fanciful ideas, now lie just beyond our grasp. As nations begin to reach for the future, the law will guide them. The remarkable pieces in this issue address how the law currently views geoengineering, and how it may change as technology advances.

I would like to thank Professor Rex Zedalis for his work in arranging this symposium, and Wes Pebsworth for his work as a friend and mentor.
